General Description

The SST39VF6401B device is a 4M x16, CMOS Multi-Purpose Flash Plus (MPF+) manufactured with SST proprietary, high performance CMOS SuperFlash technology. The split-gate cell design and thick-oxide tunneling injector attain better reliability and manufacturability compared with alternate approaches. The SST39VF6401B writes (Program or Erase) with a 2.7-3.6V power supply. This device conforms to JEDEC standard pinouts for x16 memories and is command set compatible with Flash devices that support the AMD/Spansion command set, enabling customers to save time and resources in implementation.
