General Description

The UDA1338H is a stereo audio digital-to-analog converter (DAC) manufactured by NXP Semiconductors (formerly known as Philips Semiconductors). It is designed to convert digital audio signals into analog audio for high-quality sound reproduction.

Features

- Stereo audio DAC with a high-quality output.
- Supports a wide range of digital audio input formats, including I2S and left-justified.
- Low distortion and high signal-to-noise ratio (SNR) for accurate audio reproduction.
- Programmable volume control and de-emphasis filter for audio processing.
- Power-down and mute modes for power-saving and audio control.
- Operates with a single supply voltage.

Application

- Digital audio systems, including CD players, DVD players, and Blu-ray players.
- Digital audio interfaces in audio receivers and amplifiers.
- Portable audio devices like MP3 players and smartphones.
- Automotive audio systems and infotainment systems.
- Audio applications in various consumer electronics and industrial products.
