General Description

The OP727 is a precision dual rail-to-rail output single supply amplifier featuring micropower operation and rail to rail output ranges. The OP777, OP727 and OP747 amplifiers provide improved performance over the industry standard OP07 with $\pm 15V$ supplies and offer the further advantages of true single supply operation down to +3.0V and smaller package options than any other high voltage precision bipolar amplifier. Outputs are stable with capacitive loads of over 1000pF. Supply current is less than 300 μA per amplifier at 5 V. 500 Ω series resistors protect the inputs, allowing input signal levels several volts above the positive supply without phase reversal.

Features

Low Offset Voltage: 100 μV Max

Low Input Bias Current: 10 nA Max

Single-Supply Operation: 3.0 V to 30 V

Dual-Supply Operation: $\pm 1.5 V$ to $\pm 15 V$

Low Supply Current: 300 μA /Amp Max

Unity Gain Stable

No Phase Reversal
