General Description

The OP467GS is a specific electronic component, which appears to be a precision quad operational amplifier manufactured by Analog Devices. It is designed for applications that require high precision, low noise, and low distortion amplification.

Features

- Quad operational amplifier
- Low input offset voltage and input bias current for high precision
- Low noise and low distortion for accurate signal amplification
- Wide supply voltage range for flexibility
- Rail-to-rail input and output operation
- High open-loop gain and CMRR for reliable performance

Application

- Signal conditioning and amplification in precision instrumentation
- Active filters and equalizers
- Sensor amplification and signal conditioning
- Data acquisition systems
- Medical and scientific instruments
- Audio signal processing
