General Description

BZV55C15 is a type of zener diode, which is a semiconductor device that allows current to flow in the forward direction like a normal diode, but also allows current to flow in the reverse direction when the voltage exceeds a certain threshold level.

Features

Zener voltage of 15V

Maximum power dissipation of 500mW

Package type: DO-35 (also known as axial leaded package)

Application

Voltage regulation

Overvoltage protection

Voltage reference

Signal conditioning
