General Description

A80386DX-20 is a microprocessor chip that was introduced by Intel Corporation in 1989. It is also known as Intel 386DX or simply 386.

Features

It operates at a clock speed of 20 MHz

It is a 32-bit microprocessor with a 32-bit data bus

It has 275,000 transistors

It can address up to 4 GB of memory

It has a built-in memory management unit (MMU) and a floating-point unit (FPU)

Application

The 386DX was widely used in personal computers (PCs) and workstations in the late 1980s and early 1990s.

It was also used in embedded systems such as industrial control systems, medical equipment, and avionics.
