**RFO** 

# **General Description**

JS28F128J3C120 is a flash memory device manufactured by Intel. It is a 128 megabit (Mb) NOR flash memory chip, which means it is nonvolatile and can be electrically erased and reprogrammed.

### **Features**

## **Application**

capacity

High-density flash memory with 128 Mb of storage Embedded systems: The high-density storage and low power consumption make it suitable for use in embedded systems, such as routers, switches, and industrial control systems.

Fast access times of 70 ns (max) for read operations

Automotive: The extended temperature range makes it suitable for use in automotive applications, such as in-car entertainment systems and advanced driver assistance systems (ADAS).

Low power consumption with standby current of less than 2 mA and active current of less than 20 mA

Consumer electronics: The flash memory can be used in a wide range of consumer electronics, such as smart TVs, set-top boxes, and digital cameras.

Extended temperature range from -40°C to +85°C

Industry-standard 48-pin TSOP package
